New album „A.R.C.A.B“ (All Robocops Are Bastards)
© 2017 Burdesgate/subwave-music

Years have past since the last release of those alternative rockers from Lebkuchen-City. Five years they almost got lost in the well known doom of a daft rock'n'roll band. Growing fame and easy money came with too many drugs and beautiful women, followed by drug problems and less beautiful women, musical and individual differences, lineup changes, a tribute album und finally the buzz faded out. Some have rumoured the band had already taken its last breath, but hey! Surprise, surprise: They are still there. And regardless of the consequences, weight problems and loss of hair they're still standing on stage, sweating and playing their hearts out, until the devil takes them.

Not the next big thing, no hype, no bullshit, just guitar, bass and drums and rock for sure. We can't do something else, but that's what we can do right.

Call it Indie, Alternative, Retro or Post or New or whatever?

Why should we care as long as the crowd is moving their arses!

Subwave are probably one of the most underestimated rock bands from Germany though no one can say how many bands have been influenced by their outstanding work.

If somebody will sing the song of the unknown heroes of Rock'n'Roll there will be no doubt: Subwave can not be unsung.

And any critic worth its salt won't deny their major importance in music history.

More than ten years on the road to success, they came a long way producing eternal masterpieces only to be appreciated by the afterworld.

Subwave is definitely one of the greatest bands ever and ever and ever.

It's been an open secret that these guys are good since the release of their last album "Fast Forward" (Burrofeliz/SPV) while the rough sound of their prior album "Kurt Cobain" or the independent milestone "Reject" got them the status of an insider tip already.

The brilliant Greatest-Hits-Album "A Tribute to...Subwave" was only the next step and the release of their new album "A.R.C.A.B" will be just one more.
