#### About the Album

Elements is the latest release of the German prog-metal band Thoughts Factory. More than 5 years after their debut 'Lost' the 5 musicians around mastermind Sven Schornstein (keys/production) strike a new path for themselves by merging classic progressive, post and indie rock influences into a modern and occasionally symphonic metal album. Their new singer Cornelius Wurth convinces with a powerful yet still clear performance.

The 10 songs take the listener on a musical journey through the elements of humankind's coexistence and the obstacles of affection. These are represented by the emotional stages of a growing young man, who has to deal with life and death, love and hate, hope and depression. It's a plea for more sustainability relating to the political and ecological challenges we'll be facing in the near future.
